SUPREME INSTRUMENTS CORPORATION

GREENWOOD - MISSISSIPPI - U. S. A.

89 is 385

COMBINED TUBE LIST FOR SUPREME INSTRUMENT MODELS
 35 - 85 - 85P - 85 PL - 85 C - STANDARD DIAGNOMETER
 89 S - 89 D - 89 C - 385 - 89 DL - 385 D L

THIS LIST SUPERSEDES ALL PREVIOUS LISTS FOR THE ABOVE MODELS

ISSUED 6-1-39

ASK FOR SUPPLEMENT TO LIST "A" DATED 6-1-39
 WHEN INQUIRING REGARDING NEW TUBE LISTINGS

NOTE: Due to the number of new tubes issued in the last year, it is impossible to print these on tube cards to fit the lid of your tester. Thus, we have discontinued their use and all listings have for some time been issued in booklet form.

PLEASE STUDY THESE INSTRUCTIONS BEFORE PROCEEDING

GENERAL - Two basic tube lists have been combined in this listing--those serving both the 85 and 89 series tester. Thus, certain columns in this tube list serve both series testers, some serve just the 85 series (comprising 35, 85, 85-P, 85-PL, 85-C and Standard Diagonometer) while others serve just the 89 series (comprising 89-S, 89-D, 89-C, 385, 89-DL, 385-L). The letter (O) after a tube type denotes an octal tube type. The letter (L) after a tube type denotes a loctal tube type. All others are non-octal types.

ALL OWNERS - Tubes with the letter "S" enclosed in parenthesis, i.e., "(S)" are special foreign types with 14.0 volt filaments. Do not confuse these with similar American types having much lower filament potentials.

New tube listings are available from the factory on application. If you desire the latest supplement, please so state and enclose 5¢ in stamps. If you want the complete tube list booklet, please so state and enclose 25¢ in stamps. Thank you.

THE FOLLOWING TUBE TYPES CANNOT BE CHECKED ON THESE TESTERS - OA4(O), OZ3, OZ4(O), 2E5, 6AB5, 6AD6(O), 6AF6(O), 6E5, 6G5, 6N5, 6T5, 6U5, 6X6(O), BA, BH, BR, WX12, WD11, 2Y2, 884(O); 885, VR90, VR105-30, VR-150-30. We suggest that in these cases the serviceman try a new tube in place of the doubtful one.

TO PROPERLY USE FOLLOWING TUBE LISTINGS -

OWNERS OF 89 SERIES TESTERS SHOULD REFER TO THE FOLLOWING COLUMNS:
 (1) Type, (2), F.V.S., (3) the four columns under "89 series."
 OWNERS OF 85 SERIES TESTERS SHOULD REFER TO THE FOLLOWING COLUMNS:
 (1) Type, (2) F.V.S., (3) the two columns under "85 series."

OWNERS who have models with "R" potentiometers should use "R" settings. Those having Models with "S" potentiometers should use "S" settings. OWNERS OF BOTH SERIES should also note the column "S.I." wherein will be a key letter or letters after certain tubes which refer the user to the following special instructions or adapters required to test tubes.

THE KEY LETTERS FOLLOW WITH THEIR MEANING:

A - 85 series only - use Adapter with Orange Dot (our stock #7173).
 Price \$0.59.

- B - 85 Series only - use Adapter with Violet Dot (our stock #7174).
Price \$0.59.
- C - 85 Series only - use Adapter with Black Dot (our stock #7136).
Price \$0.59.
- D - 85 Series only - use Adapter (our stock #5542). Price \$1.25. This
Adapter has attached lead.
- E - 85 and 89 series - use Adapter (our stock #7530. Price \$3.00/
- F - 85 Series only - Use adapter (our stock #7749. Price \$0.59.
- G - 85 series only - Use adapter (our stock #5541). Price \$0.59. This
adapter has a violet dot and one pin clipped.
- H - 85 Series only - use adapter (our stock \$5540). Price \$0.59. This
adapter has a green dot.
- I - 89 Series only - use adapter (our stock \$5545). Price \$1.00. Octal
base to octal pins.
- P - 89 Series - "F" and "8" buttons should light neon tube during leak-
age test.
- Q - 85 Series - Depress #5 and #7 buttons simultaneously on leakage or
quality tests.
- R - 89 Series - Depress #4 and #7 buttons simultaneously on leakage and
quality tests.
- S - 89 Series only - Will light on leakage test on "F" and "8".
- T - Cathode connected to mid-point of filament. Tube tested by connect-
ing two halves of filament in parallel and applying 3.3 volt fila-
ment potential. On leakage test DO NOT depress buttons "F" and "7".
- U - Neon will light during leakage test on both "F" and "7". CAUTION!
When making quality test be sure to depress and release "F" and "7"
simultaneously as the tube will be damaged otherwise.
- V - 89 Series only - Depress "F" and "8" buttons continually during
leakage test.
- W - 89 Series only - Throw the "12A5" and "12Z5" tumbler switches from
"NORMAL" to the "12A5" and "12Z5" positions during test.
- X - 85 and 89 Series - Throw "12A5" switch from "NORMAL" to "12A5"
position during test.
- Y - 85 and 89 Series - Throw "12Z5" tumbler switch from "NORMAL" to
"12Z5" position during test.
- Z - 85 and 89 series - Throw "6Z5" tumbler switch from "NORMAL" to
"6Z5" position during tests.

SPECIAL MODERNIZATION NOTICE

Due to the announcement of 35, 50, 70 and other high voltage filament type tubes, a change is necessary in older type Supreme testers to bring them up to date. We are happy to offer a moderate priced modernization program on many Supreme tube testers which also includes testing of all Loctal tubes.

Supreme 503's without the high voltage filament supply may be modernized for \$5.45, the exact difference between the original and present net prices. Supreme 504's without the high voltage filament supply may be modernized for \$10.45, the exact difference between the original and the present net prices. Other Supreme Models on which modernization programs are available and their costs follow:

Model 501, 505-----	\$ 9.50
Model 500, 502, 502-S-----	\$10.00
Model 89-C, 89-S, 594-----	\$10.50
Model 400, 89-D, 89-DL, 506-C, 506-P---	\$11.00
Model 385, 385-L, 585-----	\$12.00
(Models 35, 85, 85-P, 85-PL, Standard Diagon- meter and all older Supreme Models cannot be Modernized)	

These prices include modernization for loctal and other hi-voltage filament type tubes and a careful check-over only. If other parts need replacement, they will be charged for at regular net prices. Transportation should be by Express. Transportation extra. Please do not fail to write us a separate letter advising us that the shipment is coming forward and send the letter sufficiently soon that it will arrive about two days before the shipment. This eliminates delays and allows us to give you the fastest service.

If your tester has been modernized by us, it will take care of all loctal, octal and non-octal tubes including 35, 50, 70 and higher filament voltage tubes.

Its operation is very simple. For all tubes except those showing the letters "HI" in the Filament Volts or in some other column of the listing, leave the "HI-LO" toggle switch in the "LO" position. In the "LO" position, all filament voltages read as indicated on your panel except 30 volts, which has been changed to 35 volts, and the blank switch position between the 1.5 volts and 35 volts position. This blank position is now for 50 volts.

With the "HI-LO" toggle switch in the "HI" position, available voltages are as follows:

<u>PANEL READINGS</u>	<u>ACTUAL VOLTAGES</u>
1.5-----	55
2.0-----	60
2.5-----	65
3.3-----	70
5.0-----	75
6.3-----	80
7.5-----	85
12.6-----	90
14.0-----	95
25.0-----	100
30.0-----	Line Voltage

Care should be exercised to keep the "HI-LO" switch in the "LO" position except when testing tubes having over 50 volt filaments.

SPECIAL PILOT LIGHT SOCKET. Set "F.V.S." to voltage of pilot light. Set "F.R.S." to #1. For Model 500, 505, 585 and 400, throw up #7 switch. For other testers leave all switches down. Special pilot light socket only included on Supreme Instruments with metal panels.

ADDITIONAL TUBE TYPES

Under this listing will be found numerous tube types which may or may not be directly replaceable by other types, but have the same base connections and tube test listing. If you do not find a tube listed under the regular listing, look in the first column of those given below. When you find your tube type, look in the second column (under "SEE") and refer to this type in the regular tube listing for tube tests.

For example, you desire to test a 14Z3. Looking under the "TUBE TYPE" column you find "14Z3." Opposite this type, in the "SEE" column, you find "12Z3." Refer to 12Z3 under the regular tube listing for tube tests on the 14Z3.

Resistance (ballast) tubes

The following Resistance (ballast) tubes are listed for your convenience so that you will not confuse them with regular receiving types of tubes. Resistance tubes do not require a quality, short or leakage test as they are merely enclosed resistors which can be continuity tested with an ohmmeter to ascertain whether they are "Good" or "Bad." In other words, resistance tubes resemble ordinary light bulbs which should either light or be replaced.

It will be noted that certain resistance tubes carry the same type number as receiving type tubes which, while confusing, is apparently unavoidable.

TUBE BASE CONNECTION FINDER FOR ALL SUPREME INSTRUMENTS MODELS

THIS LIST SUPERSEDES ALL PREVIOUS LISTS

ASK FOR SUPPLEMENT TO TUBE BASE CONNECTION FINDER ISSUED 6-1-39

WHEN INQUIRING REGARDING NEW TUBE LISTINGS

TUBE ELEMENT SYMBOLS USED IN THIS BOOKLET

F - Filament	K - Cathode
H - Heater	S - Shell (see note below)
HK - Heater and Cathode	T - Target
HC - Heater Center	XS - External Shield
P - Plate	G - Grid (See next paragraph)
D - Diode Plate	FM - Filament Mid-Tap
G - Grid	SA - Starter Anode
	IS - Insulating Shield

The numbers 1, 2, 3, 4, or 5 after Symbol "G" indicate the position of the Grids with respect to the Electron-Emitting Element, i.e., G-1 being nearest, G-2 second, G-3 third, etc.

The letters "a" and "b" after symbols are used to indicate sectional groups such as in the type 53 where "Pa" and "Ga" are plate and control grid of one triode and "Pb" and "Gb" are plate and control grid of the other triode.

"S" SYMBOL

The "S" symbol when encountered in this booklet denotes the shell or shield of the tube. Due to the variations between manufacturers, the same type tube may be offered with a metal shield by one manufacturer, a metal spray shield by another and in strictly a glass envelope without shielding by a third. Therefore, "S" denotes the shield pin connection if the tube is thus supplied. Actually, whether a tube is shielded or not, makes no difference in its test.

EXPLANATION OF SECOND COLUMN HEADED "SPEC. INST."

- 1 - G-3 connected to center tap of filament.
- 2 - K-b, G-1a and G-2a connected to Ka.
- 3 - G-3 internally connected to Ka (where two cathodes exist) or K (in one cathode tubes).
- 4 - Cathode connected to center of filament.
- 5 - With top cap.
- 6 - Without Top cap.
- 7 - GP3 connected to cathode.
- 8 - G-1a and G-2 connected internally to K.
- 9 - Heater terminals on side of base. Connect these terminals by means of short leads to #1 and #5 holes in next socket.
- 10 - Heater terminals at top of tube. Connect these terminals by means of short leads to #1 and #5 holes in next socket.
- 11 - G-3 connected to one side of filament.
- 12 - Jumper between #3 and #7 base terminals.

- 13 - Cathode connected to both #4 and #7 base terminals
- 14 - K and G₂ internally connected and not brought out to any tube terminal.
- 15 - On these tubes, the heater is tapped (HP) at 6.3 volts so that pilot light can be connected - 6.3 volts drop between #2 and #3 pins.
